Real Programmers

Don't Use Frameworks

They write web applications through the command-line straight to the server. Hats off to them. For the rest of us, Nette is a great help to our work.

Nette is a family of mature and stand-alone components for PHP 8. Ready to be smitten? Together, they create a framework that had been rated as the 3rd most popular in the world. Our philosophy is to focus on productivity, best practices, and security.

GET STARTED

Security Is a Priority

There is nothing we care about more than security. That is why we had built Nette as the safest PHP framework. It had passed many audits with flying colors, it eliminates safety traps like XSS, CSRF and brings out ground-breaking methods.

Catching Bronze

We aim to create Nette as a fun and easy to use framework, that programmers can fall in love with. And we seem to be doing it well! We were rated as the 3rd most popular framework in a survey „Best PHP Framework" by a well-know magazine SitePoint.

Over 18 Yrs of Development

We have been developing Nette for over 18 years- and counting! Libraries we provide are therefore **highly mature, stable, and widely used**. They are trusted by a number of global corporations and many significant websites rely on us. Who uses and trusts Nette?

Perfect Documentation

Nette boasts exceptionally comprehensive and elaborate documentation that is always 100% up-to-date. Every concept is explained with care and in detail, ensuring you'll never be left guessing. Our documentation guides you step by step from basic principles to advanced techniques, always emphasizing best practices and clean code.
Libraries & Framework

Clean Code and Best Practises

Nette consists of several handy standalone libraries, which can be used in any codebase, for example, combined with WordPress or another framework. Careful, some of them are highly addictive! These are the components that Nette Framework is built on.

Thoughtful, high-quality, well-tested and pure object-oriented design using the new features in PHP 8. Nette will lead to well-designed applications with emphasis on future extensibility. According to tests, Nette Framework is one of the fastest frameworks ever.

Nette Sponsors

Become a Nette sponsor and support its development. At the same time, it will help your company's exposure in the Nette community and makes it easier to attract developers.
